PITCHING YOUR TENT

1. Choose a flat site, clear away any sharp sticks or stones that may damage your tent floor.
2. Lay out the inner tent and peg it out at the corners.
3. Assemble the poles ensuring each section locks together to form continuous lengths.
4. Each pole goes from corner to opposing corner, thread the poles through the centre loop.
5. Insert the pole end into the pin on the ring at the corner of the tent and the other end into the ring on the corner diagonally opposite.
6. Attach the plastic c-clips on the inner tent to the poles. The inner is pitched.
7. Unroll the fly and lay it over the tent. Line up the windows and doors. Attach Velcro loops on inside of the fly to the poles. Hook the corners to the rings. Peg out the front and back to create the vestibules.
8. Guy Ropes are already attached to your tent. It is important to securely peg out all guy ropes as the weather can change at any time.

Please Note:

Your tent is not fire-proof, be vigilant around flames and fire. Avoid cooking inside on open flames.

This tent is not designed or intended to be used as permanent accommodation.

GROUND FORCE VENTILATION

How to operate your Ground force vents

Unzip the vent from inside the tent and insert the pole into the corners near the zip ends, the curve of the pole holds the vent open. On the outside peg out the two fly peg points and the vent guy on the inner.

COMPONENT CHECKLIST

- Inner tent and Fly
- Fibreflex poles, 2 assemblies and pole bag
- 2 Ground Force Ventilation poles
- 16 Steel pegs and peg bag
- Guy ropes (already attached to tent)

DISASSEMBLY AND TENT CARE

Remove all pegs and clean them before they are put away. Unhook the fly from the inner and remove. Remove all the frames by pushing them out, rather than pulling. Clean any dirt from the end ferrules. Fold these up and return to their carry bag. Turn the inner over to expose the floor - if this is damp or dirty, clean and allow to dry.

Flip the inner the right way up and lay the fly evenly out on top. Fold it up, folding into the centre, until the width is the size of the carry bag. Then roll up from the rear to the front, including the pole and peg bags in the roll.

If you must pack your tent up when wet, dry out as soon as possible to avoid mildew damage.

The specifications of your tent may vary from what is shown as we are always working to improve and update our products.
